

## PRODUCT INFORMATION

# BR200: BRICK MOULD RELEASE

(CODE: 7060)

### Description

Clay products are normally extruded through a die to give the required cross sectional shape. Here we refer to the oil as a die lubricant in the extrusion process. The die lubricant is fed into the laminates of the extruder mouth of the die under controlled pressure and feed rates to suit the application, e.g. bricks, roofing tiles, pipe work, etc.

### Application

A lubricant release agent used in the manufacture of clay bricks and tiles. Contains special additives to prevent clay from sticking to the moulds, cutting wires and dies of extruder machines.

### Storage

All packages should be stored under cover to avoid the possible ingress of water and the obliteration of drum markings. Products should not be stored above 60°C.

### Health, Safety and Environment

Health and safety and environmental information is provided for this product in the relevant Materials Safety Data Sheet which can be obtained by contacting Royal Precision Lubricants on (03) 9553 0840.

### Typical characteristics

Density at 15°C, kg/L	0.885
Viscosity cSt at 40°C	4.2
Flash Point °C	91
Saponification Number	13.0

*Typical characteristics are only a guide to industry and are not necessarily manufacturing or marketing specifications and do not constitute a legal liability.*
